Notes:

- Dry Contact Input Operation:** Open Wht/Red wire and Wht/Blu wire to activate relay. Relay contact will close. If more than one CLC212-D15 shares a single dry contact input, Wht/Blu must be common.
- For 60 minute delay, order model CLC212-D60.
- Suggested switches:
 Functional Devices models ACLCMAGSM or ACLCMAGDJ

With the CLC212-D15, money and energy can be saved when a closet door is inadvertently left open. In this event, the closet light will switch off after a 15 minute delay. If you wish the light to remain on after the door is open, you simply open, close and reopen the door within three seconds.

New Construction Applications

- No stepdown transformer necessary
- 15 minute delay when door is left open
- Operates on any device from 120 Vac to 277 Vac
- Light 18 AWG wire used to control relay, instead of armored cable, but any size may be used
- Closet light turns on when door is open
- Customer needs to purchase Form C or N/O door switch

A Normally Open (N/O) door switch is open when no outside forces are acting upon it. When used in this application, the switch is closed when the door is closed, and the switch opens when the door is opened, activating the controller to turn the light on.

(Door switch not provided, see notes for details.)
